# Cyberiad Cortex Enterprise Edition

The Cyberiad Cortex is a multi-agent AI platform built exclusively to streamline non-clinical operations for dental organizations.

The **Enterprise Edition** is a pan-enterprise intelligent operating layer for complex dental organizations.

It unifies disparate tools and processes across a complex organizational landscape to deliver unprecedented visibility, control, and coordination across the enterprise.

## Differentiation

The Enterprise Edition is not just another tool. It is a real-time, cross-location operational control plane that standardizes, orchestrates, and enforces how the business actually runs.

It integrates with all key PMS solutions, standardizes workflows, orchestrates execution with agentic AI, and enforces organization-wide consistency.

This highly differentiated offering offers a complete, correlated, and automated way to scale.

## Outcomes Delivered

### Cross-System Patient Unification

Correlate patient identities across disparate databases using probabilistic matching, creating a single source of truth for treatment history, balances, and preferences.

### Intelligent Scheduling & Load Balancing

Ingest real-time availability from every PMS, apply enterprise-level rules, and automatically book appointments into the optimal slot enterprise wide.

### Automated Insurance Verification

Ingest from multiple PMS and payer portals, run batch or real-time eligibility checks, and return structured results to each office's native system—without custom integrations.

### Pan-Enterprise Analytics

Unify locations into a real-time hierarchical view of production, collections, denials, no-shows, treatment acceptance, and chair utilization to optimize the enterprise.

### Centralized Revenue Intelligence

Surface invisible leakage across every location with advanced analytics, then act on it – turning hidden data into top-line revenue recovery and scale.

### M&A Rapid Onboarding

Scan a new office's PMS schema, map it to the common data model, and auto-configure standard workflows (recall, scheduling, billing rules) in under two weeks.
