

CYBERIAD.AI

Solution Overview: Professional Edition

The Cyberiad Cortex is an AI-powered "central nervous system" for dental organizations. It unifies operations across all locations by integrating with existing systems and using a multi-agent AI layer to automate non-clinical tasks.

This proprietary, multi-tenant SaaS model helps drive growth, efficiency, patient retention, and profitability across all locations – all at scale and under complete control.

Differentiation

Unlike point solutions that tackle single tasks, the Cyberiad Cortex is a unified, multi-agent AI platform built exclusively for dental groups to orchestrate complex workflows across the entire organization with HIPAA compliance engineered at its core.

It integrates with key practice management systems to supplement existing workflows, and it is deployable in weeks, not months.

Outcomes Delivered

Automated Patient Engagement

An AI receptionist that works 24/7 to interact with potential and current patients and answer questions in any language and on any platform (text or voice).

24/7 New Patient Intake

A dedicated AI agent to capture new patients around the clock by qualifying needs, checking insurance, and scheduling appointments instantly.

Intelligent Scheduling

AI-driven management of complex, multi-location schedules to maximize provider utilization and align with patient preferences.

Automated Recall & Confirmation

An outbound system that proactively contacts patients for recall visits and manages confirmations or rescheduling, keeping the schedule full.

Front Desk Augmentation

AI agents that handle high-volume calls and messages, freeing human staff for complex tasks and delivering unparalleled patient responsiveness.

Collections Automation

A compliant AI agent that automates sensitive financial conversations, sending payment reminders and processing outstanding balances to improve cash flow.
